**BENFIELD & WHITE RIDGE ANGUS**

*22<sup>nd</sup> Annual Angus Bull Sale*  
**SATURDAY, MARCH 17, 2018 1:00 PM**  
**ROCKINGHAM FAIRGROUNDS, HARRISONBURG, VIRGINIA**

**Sale Staff:**

Bruce Miller, Auctioneer.....817-247-0115  
 Scott Weller.....540-294-0555  
 Jeff Marsh.....540-229-0754  
 Charlie Strickler.....540-718-7793

**Sale Consultants:**

Chris Wojciechowski.....540-292-0841  
 William Walther.....405-612-7554

**Breed Representatives**

Chris Jeffcoat.....717-476-1496  
 American Angus Assoc  
 Virginia Angus Assoc.....540-337-3001

**Sale Location:** The Rockingham County Fair-ground is located off Route 11, approximately 1.5 miles south of Exit 243 on Interstate 81.

**Food:** Complimentary beef barbecue lunch provided.

**Lodging:**

Holiday Inn Express.....540-433-9999  
 Harrisonburg, VA  
 Ramada Inn.....540-434-9981  
 Harrisonburg, VA

**EPD and Performance Information:**

EPD's are current as of February 10, 2018 and are provided by the American Angus Association. Complete performance and pedigree information is available on request.

**Terms:** All animals sell under the standard terms and conditions of the American Angus Association—see [www.angus.org](http://www.angus.org). Announcements from the sale block on sale day take precedence over information in the catalog. All animals become the full responsibility of the purchaser at the fall of the gavel.

**Transportation and Insurance:** Truckers believed to reliable will be on hand to deliver purchases. Assistance in arranging transportation of purchases is available. Insurance coverage available through PayneWest Insurance. Information will be at settlement desk or you may call Craig Arno, Payne West Insurance, 406-556-4605.

**Birth Weight and Calving Ease:** We recommend that bulls purchased as heifer bulls be sampled on a small group of heifers to determine the true calving ease potential for your herd before breeding to a large group of heifers.

**Animal Health:** Health papers will be available for interstate shipment

**Breeding Guarantee:** Fertility- All bulls have passed semen tests and breeding soundness examinations. Scrotal measurements will be available sale day and by request. All bulls are fertility guaranteed as recommended by the American Angus Association in the Sale Terms and Conditions. Claims for nonbreeders must be made promptly and within 4 months of the bull being put in service and no later than December 31, 2018..

**Genetic Defects:** All bulls are free by pedigree of all genetic defects that have DNA tests available which are monitored by the American Angus Association.

**Liability:** Persons attend this sale at their own risk.

**Catalog:** Please bring your catalog to the sale. Extra copies are limited and available only on request. Layout and design, Strommen Live-stock Services, Fort Rice, ND. Printing and handling, Boelte Hall, Roeland Park, KS.

Wrabobby@gmail.com

*Dear Friends,*

Welcome to the 22nd Annual Headquarters for Hindquarters Angus Bull Sale. We thank our many friends and loyal customers for supporting the Benfield and White Ridge Angus programs the past two decades. Our breeding goals at Benfield and White Ridge are to produce the cattle we would want to buy if we were commercial breeders – the kind of cattle that fit their environment and require a minimum of inputs. That is the continued focus of our breeding programs and a philosophy we have faithfully executed for more than 35 years.

This is more than reading numbers. We keep pressure on the necessary production traits of fertility, longevity, udder quality, disposition, structural soundness, production efficiency and fleshing ability. Our herds thrive on grass and grass hay. Calves are not creep fed to protect the value of maternal records. We breed cattle that are fertile, structurally sound, easy calving and productive on grass and grass hay without further supplementation. We want our cows to look like cows: balanced, big bodied, easy fleshing, with excellent udder quality. We want our bulls to look like bulls: masculine, wide based, heavy muscled with large, well-shaped testicles.

**On Saturday, March 17th**, we will offer another excellent group of deep, stout, heavy-muscled bulls of outcross genetics with growth and maternal value. These bulls are developed in large lots with plenty of room for exercise. They are self-fed a high-roughage, by-product ration and free-choice, long stem hay. You are welcome to view the bulls on our respective farms until March 15th. They will be available for inspection at the Rockingham County Fairgrounds beginning the afternoon of March 16th. Give us a call! We look forward to seeing you Saturday, March 17th.

*~ Don and Bobby*

## WATCH VIDEOS OF THE BULLS

Video preview of many of the bulls is available on YouTube at [www.youtube.com](http://www.youtube.com) Search 2018 Headquarters for Hindquarters.

Links are also available on our Facebook pages and at [www.benfieldangus.com](http://www.benfieldangus.com)

**AVAILABLE IN EARLY MARCH**

**Ultrasound:** We have elected not to ultrasound our bulls until research has been conducted that allows for IMF adjustments based on sex hormone levels. The goal of IMF ultrasound is to help accurately predict marbling scores in steer progeny. Steer marbling scores are largely unaffected by sex hormone levels. Conversely, bull and heifer ultrasound IMF scores are largely affected by sex hormone levels (testosterone, estrogen, and progesterone). Basically, the higher the sex hormone levels, the lower the IMF scores. Common sense thus dictates that sex hormone levels in breeding cattle must be measured and adjustments made to accurately help predict steer progeny marbling scores. The current system makes no adjustments and therefore produces flawed marbling EPDs which unfairly reward breeding cattle that are low in sex hormones. Low sex hormone cattle can have fertility problems, and fertility is by far the most important factor in commercial producer profitability.

We are proud to share ownership in Cool with his breeders, our good friends at Ginger Hill Angus in Washington, Va. The Ginger Hill program is widely admired for their real world production goals that feature the fertility and maternal efficiency that made the Angus breed great. It is truly a pleasure to calve heifers bred to Cool because they calve so effortlessly. We have only assisted one heifer in three calving seasons. Cool has proven to be much more than an outcross calving ease sire because he also sires the fertility, performance and maternal efficiency we value, not to mention the muscle and base width rarely found in low birthweight genetics. Owned with Ginger Hill Angus, Washington, Virginia

Cooler shares his sire's unique ability to combine the antagonistic and valuable traits of calving ease, performance, and muscle in an eye appealing, attractive package. Cooler combines a 72 pound actual birthweight with a 702 pound adjusted weaning weight, 112 ratio, and a 1276 pound adjusted yearling weight, 106 ratio. Plus, he is a sound structured, big volume, wide based herd bull prospect with outstanding maternal potential. The first Cool daughters have calved, and we are very impressed with the udder quality, teat size, and "just right" milk flow. His dam, a 2 year old Mack daughter, is a moderately framed, beautifully patterned young female that only adds to his value. **Selling 2/3 interest and Full Possession**

This calving ease prospect sired by Cool is stacked with time tested maternal genetics on the bottom side of his pedigree. His dam, by Mack, is a feminine, big bodied young female. She is patterned like her T10 dam and Pathfinder grandam, 743S. Lot 2 is a well balanced, easy keeping, big volume calving ease prospect that should sire excellent replacement females. He fits the low input production paradigm.

Cooley is a herd bull prospect that I could not recommend more highly. He is well balanced and beautifully patterned, with tremendous base width and muscle. From a maternal standpoint, the cows in his pedigree are tremendous. His 2 year old dam by Cedar Run is fault free and big bodied, his grandam was an outstanding producer with a perfect udder, and his Pathfinder great grandam was one of the most powerful and productive cows ever at White Ridge Angus. Cooley is stacked with real world performance genetics, maternal value, and muscle. **Selling 2/3 interest and Full Possession**

E11 is typical of the calving ease prospects sired by Cool because they offer so much more than low birthweight. They consistently have performance, length, and maternal value. His 2 year old dam by Cedar Run is a moderate framed, easy keeping female with a perfect udder—the kind that keeps you in the cow business.

Fridge is the most outstanding calving ease prospect ever produced by White Ridge Angus. He is moderate framed, structurally sound, and beautifully patterned, with base width, muscle, volume, and fleshing ability. Maternally, he is outstanding. We love his 2 year old dam by Mack, and her mother by T10 is one of our favorites, posting a progeny WWR of 3 @ 109. His disposition tops off this great package. Fridge is the most laid back, easy going bull you will ever be around. **Selling 2/3 interest and Full Possession**

Lot 6 is a stout made prospect with outstanding length, and internal dimension rarely seen in a low BW EPD package. His dam is a full sister to WRA Mirror Image Z11, a feature of our 2013 sale, selling to Jason Kading of Millbrook, NY. As a mature bull, Z11 topped Jason's dispersal sale at over \$10,000. E6 is the same low input, easy keeping kind as Z11.

E15 is quite the interesting prospect. He started with only a 62 pound birthweight, and he has the lowest BW EPD of the White Ridge bulls. Yet, he performed extremely well on feed, and improved to a 1230 pound yearling weight for a 102 ratio. Plus, he is one of the stoutest and most heavily muscled bulls in the offering. Very moderate framed, E15 is developing into an easy keeping heifer prospect with a big top, muscular hindquarter, and tremendous rib and volume. In addition, his dam is a maternal sister to the dam of the Benfield herd sire, Whitley. **Selling 2/3 interest and Full Possession**

This is a calf we should have clipped for pictures—he just keeps getting better every day. But, that should be expected when you consider the maternal side of his pedigree. His dam is regarded as one of our very best young cows, while his Pathfinder grandam by T10 records 6 @ 106 WWR. She is considered to be one of the very best cows ever at White Ridge Angus. E22 offers a unique blend of calving ease, performance, and maternal traits widely needed in today's population of terminal genetics.

The Whitley progeny have stood the test of time. He is the rare bull we continue to use year after year. His sons were popular in past bull sales and the 2018 offering is outstanding. We purchased Whitley to use on Substance daughters and other females that trace to his dam, Benfield Edella 1105. He was the top performing bull in his calf crop. The Whitley x Substance cross combines the best genetic lines developed in the Benfield and White Ridge breeding programs. Whitley consistently sires extra power, base width, volume, capacity, and muscle in a free moving and moderate birth weight package. His daughters are making excellent cows. They are easy keeping, moderate in size, and structurally sound with excellent udders. **Whitley Z10 is now a featured sire at Trendsetter Genetics in Glencoe, Oklahoma.**

You know a cow is doing everything right when she raises five consecutive sons that pass all the hurdles to make our annual bull sale. The last four calves by Benfield Queen L 3611 are Whitley sons who all recorded positive weaning and yearling ratios. You can study genomics and EPDs until your head hurts but cows that breed back on time and raise big calves with minimal labor and feed are what produce real grassland profits--this is why we will continue to use Substance for many years to come. 723 is a slightly larger framed, clean fronted and very long bodied prospect with big weaning performance and added muscle. Use him with confidence to build herd weaning performance from growth and superior daughters as well. His pathfinder grandam by Genesis is a donor cow at Benfield.

715 is a powerful and moderate frame Whitley son with tremendous volume, depth of body and total mass. He is structurally correct and free moving. His powerful dam is an Angus Pathfinder female and one of our very best Substance daughters. Her progeny by Whitley, Tequila, Colt and Final Answer have excelled compared to herd mates. A maternal brother by Colt was our high selling bull in 2016. The Whitley x Substance cross is a proven mating of genetics that excel on grass.

**A maternal brother to Lot 13 by Benfield Colt A45, who sold for \$9,200 in 2016.**

One of our favorites since birth, 740 is a wide based, deep bodied and big volume herd bull. He combines outstanding performance with plenty of muscle and natural thickness. We admire his fault free design, structural correctness and freedom of movement, a combination that is hard to find. His prolific dam has an outcross pedigree at Benfield.

727 is a great example of the balanced trait progeny we strive to produce. Take note of his outstanding performance, muscle and base-width with extra length. Few yearling bulls have the testicular size and sexual maturity at this age as 727. His dam is a moderate sized, easy keeping, and prolific Substance daughter that has done everything right with a production record of a 105 for weaning and 104 for yearling.

Here is a modest birth weight Whitley son out of an easy keeping Substance daughter and productive cow family. The dam of 743 boasts a production record of 5 calves at a 95 ratio for birth and 101 for weaning and yearling. Lot 16 is a moderate framed, balanced trait bull with a fault free skeletal design. He will sire superior females that thrive in a low input grass-based programs.

Lot 21 is an attractive, well balanced, sound and clean made herd sire prospect. He continues to improve and performed well on test. He stacks Whitley, Reality, Tracker 458 and Genesis in his pedigree, four bulls we used heavily for many years with great success at Benfield. His Reality dam is a powerful, deep bodied and wide based cow that is extremely easy keeping and moderate in frame size. Lot 21 is an excellent choice to produce pounds heavy calves and females adapted to a grass based low input environment.

Unfortunately, the dam of 760 got stifled last spring and was culled in the fall. Despite this disadvantage, Lot 23 weaned near the herd average. He is stacked with the proven genetics of Whitley, Imaemaker, Intrepid and Genesis and from a dam that weaned 8 calves on time for a 101 weaning ratio. In addition, 8518 raised the high selling bull in our 2015 bull sale by Reality. If you need a spare bull this spring and the time to develop this younger bull, take a look. The genetics are sound.

We searched nationwide for a herd bull that would meet our strict selection criteria, and ironically found him right under our noses at our neighbor's Mystic Hill Farm in Culpeper. A complete outcross to our program, Mack features a pedigree stacked many generations deep with fertile, sound, functional, fault free cattle. His sire, Mick, was a long time Select Sires roster member best known for his fabulous, long lived and productive daughters. Mack's dam has earned her place as one of the elite cows in the Mystic Hill program—in fact, a full brother to Mack topped their 2015 sale at \$13,000 to Brad Boner in Wyoming. Mack's combination of low birthweight, high performance genetics with rock solid maternal value makes him a sire that will have significant influence in our herd for years to come. **Owned with Mystic Hill Farms, Culpeper, Virginia**

Here is the performance king of the 2017 White Ridge Angus calf crop. And, it should come as no surprise because his full sister was at the top of her contemporaries for weaning and yearling, and she has now developed into a powerful young cow. Additionally, his full brother, selected by Paul Neale of Bealeton, Virginia, was a top performer in 2015. Paul reports nothing but good things about his calves. The productive dam of E4 records 4 @ 107 WWR. E4 is a slightly larger framed bull that should add pounds and performance while maintaining maternal value.

The combination of Mack and T10 daughters consistently yields fault free, production oriented progeny with outstanding maternal value. E21 is no exception. His productive dam is a maternal sister to WRA Cedar Run D2. D2 topped our 2017 sale at \$10,000, selling to Silas Chapman of Alberta, Canada.

We purchased Tequila from Ginger Hill Angus as the top selling lot in their 2014 sale. He is a balanced trait bull that compliments the Benfield females and matches the selection criteria we emphasize. Tequila is a short hair bull that was bred and raised in a fescue tolerant herd. We view his mature size as right on target. Tequila has excellent foot structure, big testicles, plenty of volume, and extra muscle. His growth EPDs continue an upward climb since he sires outstanding performance. His quiet and gentle disposition is an added benefit. Tequila 305 is backed by a strong maternal heritage of line-bred females. His dam is a productive, easy keeping female with 5 calves at a 105 weaning ratio and 107 yearling ratio. The first crop of Tequila sons averaged \$4300 in our 2017 bull sale. Semen available. **Owned with Ginger Hill Angus.**

Tequila 305 has done a great job and 730 is an example of the quiet and balanced trait bulls he will sire. Optimum trait selection requires a resistance to the new hot trait or genomic number that does not improve a cow man's profits. Lot 34 is stacked with proven grassland genetics adapted to this area. He will sire short haired cattle that will work on fescue. His Kona dam stems from our productive and fertile Queen L cow family. She is an Angus Pathfinder and records eight calves with a weaning ratio of 104.

If you want extra pounds and muscle, take a look at this easy-going Tequila son. He recorded the high yearling weight in this year's crop at Benfield. He is a big volume, long bodied bull with plenty of width down his top and hindquarter. In addition, we like his phenotype and structural correctness. He Tracker dam is a tremendous cow and excellent producer. She has raised three prior bulls for our sale including a son by Elliott that sold for \$8500. Lot 35 is a super herd bull that brings a balanced EPD profile with proven genetics on the top and bottom side of his pedigree.

Cedar Run is proving that our confidence in him was well founded. His sire, Cedar Ridge, is a product of the nation's premier no nonsense, low input, grass based breeding program at Cole Creek Angus Ranch in Joliet, Montana. The Cole Creek herd does not compromise on the valuable traits not measured by EPDs, such as structural soundness, fertility, longevity, and maternal efficiency. A total outcross, Cedar Ridge offers calving ease with functional efficiency for low input programs. Cedar Run effectively combines those positive traits of Cedar Ridge with the added performance and muscle from his dam, 115P. She is also the dam of T10, Vindicator, and Walker. A powerful, beautifully patterned, heavy muscled and moderately framed individual, Cedar Run is proving to be a sire of moderate framed, well balanced, heavy muscled, low input and low birthweight progeny. His daughters are proving to be the low input, fault free, easy keeping kind we admire.

In 1991, Ohlde Cattle Company produced OCC Anchor 771A. Anchor went on to see widespread use nationwide. A very moderate framed, heavy muscled, and easy fleshing bull, Anchor's popularity was based on his ability to "change" bigger framed, harder fleshing cows in one generation. We believe E25 has similar ability to be a "changer" bull, but with more style and balance. This well balanced, attractive, moderate framed prospect has tremendous spring and depth of rib, base width, muscle, and fleshing ability, along with excellent testicular size and shape. His 2 year old full sister is simply fantastic, and their dam is a wedge shaped, feminine, beautifully balanced young cow. E25 is the bull to correct generations of the toxic terminal genetics that have been used heavily the past 15 years. **Selling 2/3 interest and Full Possession**

Lot 41 is a full brother to WRA Cedar Run D11, one of our favorites from our 2017 sale. Their productive dam raised 8 calves with birthweight and weaning ratios of 95 and 101, respectively. Unfortunately, we lost her late last summer, and Lot 41 had to fend for himself for a while prior to weaning. The setback was only temporary. He has developed into an outstanding low birthweight prospect with balance, length, and muscle.

	<b>100</b>

Mack C12 sired performance and muscle in his first crop of calves out of two year old heifers. Lot 45 is a bigger birthweight son by C12 that performed well on test. He is well balanced with exceptional depth of body and a thick and deep hindquarter. His Colt dam did an excellent job on her first calf and is a promising young female. The grandam by Iagemaker is an Angus Pathfinder cow with the top weaning record in our herd. She records 9 calves for a weaning ratio of 110.

Here is an exceptional low birthweight prospect that checks all the boxes. Lot 46 is an impressive clean made individual with extra power, muscle, and performance from a super cow family. He is sound and free moving and continues to improve this spring. 703 is wide topped and thick butted. He will add performance and muscle while moderating birth weight, a unique and sought after combination. The more you study this bull the more you will like him. His dam is a super young Reality daughter. The grandam raised 10 calves at a 104 ratio.

**Benfield Reality 6211 is the sire of the dams of Lots 21, 46 and 47.**

You can't ask for much more from a two-year-old heifer than 707. Study his weaning and yearling performance. Lot 47 is more than growth however. He is a wide based bull with exceptional spring of rib and natural thickness. Lot 47 stacks a straight Benfield pedigree on the bottom side of Reality, Mosby, Kona, Java, and Genesis.

Born unassisted out of a Marshall granddaughter, Lot 48 is an attractive and clean profile Mack C12 son from a productive cow family. He is structurally correct and free moving. When first calf heifers bring in calves with actual weaning weights over 600 pounds in a grass and hay program, we know they will work for us and work for our customers.

Don't overlook this excellent calving ease bull with great performance from a powerful first calf heifer by Benfield Colt. The sire of Lot 49 is a Ginger Hill bred bull we used on a few heifers. 704 is exceptionally docile, very long sided, clean fronted, and moderate in frame size with adequate muscle. His weaning and yearling growth was excellent compared to his peers sired by higher growth bulls and mature cows.
